

HOW TO USE SHADESTAY

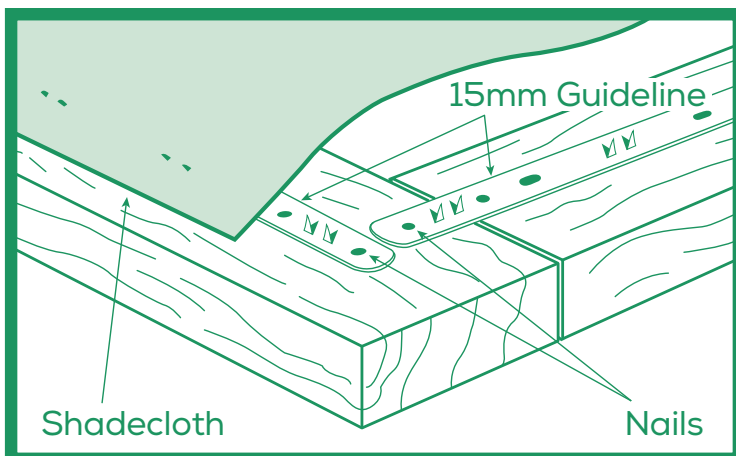

WITH THE COVER STRIP

1. Draw a guideline 15mm around the inside of the frame.
2. Place Shade Stay along the line.
3. Nail Shade Stay around all 4 sides of the frame, using every second elongated hole.
4. Fit shadecloth. Adjust as needed by lifting shadecloth off the Shade Stay points and pulling until desired tension.
5. Trim away unwanted excess.

IMPORTANT: Hammer the fixing points down after installation, if there is any risk of injury.

WITHOUT THE COVER STRIP

1. Nail the bottom section of the Shade Stay cover strip along the edge of the frame.
2. Sink the nails with a nail punch to avoid the Shade Stay strips getting stuck.
3. Slide the Shade Stay strips into the bottom section. If the strip is too long, shorten the strip by using a pair of pliers and the bend and break method.
4. Hook the shadecloth onto the Shade Stay strip and adjust until the desired tension.
5. Trim shadecloth to size and clip the top section of the Shade Stay cover strip into place.

- Enclose decks, verandahs, entertainment areas.
- Easy to install and reuse year after year.
- Saves you money and lasts longer.
- Easily remove and replace shadecloth.
- For a professional finish to a shadecloth installation.
- One person installation.
